

Reliability for your home.

Western Red Cedar has natural properties that allow it to protect homes against hostile weather, water, and pests. Our SIS2E Boards add these benefits to any outdoor project, and have the durability to stand the test of time.

BENEFITS

Western Red Cedar Boards are a versatile, lightweight product optimal for any exterior project, such as siding, fencing, and trim due to its stability and durability, including natural resistance to weather, infestation, and decay.

These boards are often installed with the rough side exposed to add character, warmth, and a rustic flair to projects, but can also be used from the smooth back.
